

DRAFT

DIRECTOR OF CENTRAL INTELLIGENCE DIRECTIVE NO. 1/11

(Attachment 4)

RESEARCH AND DEVELOPMENT

The functions of the Security Committee as they relate to research and development include:

1. With respect to general technical surveillance countermeasures research and development:

a. To establish and direct a program of research and development leading to improved technical surveillance countermeasures equipment and techniques.

b. To coordinate research and development programs in the technical countermeasures field, particularly to ensure an effective exchange of information and to avoid duplication.

c. To promote joint development and procurement of specialized items of technical surveillance countermeasures equipment where cost savings or increased security can be achieved through interagency exchange of prototype equipment for evaluation purposes and through joint procurement activities.

d. To establish and coordinate research and development programs in such related areas as physical security devices and computer security systems.

DRAFT # 2

2. With respect to physical security, computer security and other technical aspects of security:

To initiate and coordinate research and development programs required to support the other missions of the Security Committee.

3. With respect to foreign technical threats:

To identify and consider any new foreign technical threats in the field of security resulting from advances in US or foreign technology.
